

# Paper Plate Fish

Make a fish out of a paper plate and construction paper!

## What you need:

Colored construction paper

Paper Plate

Glue stick

Scissors

Googly eye—optional

## What to do:

1. Cut a triangle slice out of your paper plate (the triangle should have about a 6-inch hypotenuse)
2. Glue the triangle piece you just cut out on the opposite side of the plate. This is your fish's tail.
3. Cut out three triangle shapes. This will be your fins and tail pieces.
4. Cut out a variety of different sized paper ovals in whatever colors you would like. Fold the ovals in half, then cut them in half. These will be your fish scales.
5. Starting towards the tail of the fish, glue on your paper ovals. Make sure the oval shape is pointing towards the fish tail. Glue on as many "scales" as you would like!
6. Glue on a triangle on the top side and bottom side of your plate. These are the fish's fins. Glue one more on the tail piece.
7. Add a googly eye if you have one.
8. You are all done!
